2500 Series Air Curtain
Surface Mounted Models
For indoor use: openings up to 11ft-6in [3.5m] height

Models: 2551, 2572, 2593: Ambient air – No heat
2551EH, 2572EH, 2593EH: Electric heat
2551WH, 2572WH, 2593WH: Hot water heat

Conforms to:
CAN CSA-C22.2 no.46-13 & UL 2021(Ed.3): 2013

Installation, Operation and Maintenance Instructions

Installer: Complete the following for future reference.
Present manual to end user for safe keeping in file.

Date of Purchase ..............................................
Model Number .............................................
Serial Number ...............................................  

Schwank and Infrasave:
USA  Canada

csr@infrasave.com

Model and Serial numbers are required when contacting the manufacturer’s service department.
Proof of purchase is required to make a claim under warranty.
WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

When using electrical appliances, basic precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

1. Read all instructions before installing or using this air curtain heater.
2. This air curtain heater can be hot when in use. To avoid burns, do not let bare skin touch hot surfaces. To avoid a fire situation keep combustible materials, such as paper, curtains, blinds, clothing, etc. at least 4 feet (1.2m) from any part of the air curtain heater; front, sides and rear and away from the warm air discharge.
3. Extreme caution is necessary when the air curtain heater is used by or near children or invalids and whenever the unit is left operating and unattended.
4. Do not operate the air curtain heater if it malfunctions. Disconnect electrical power at service panel and have unit inspected by a reputable electrician before reusing.
5. Do not install or use the air curtain heater outdoors.
6. To disconnect the air curtain heater, turn off at the remote control (see Section 11. Remote Control Operation) and turn off electrical power to air curtain heater circuit at main disconnect panel (or operate local disconnect switch if provided)
7. Do not insert or allow foreign objects to enter any air inlet or discharge opening as this may cause an electric shock or fire, or damage the air curtain heater.
8. To prevent a possible fire, do not block air inlets or discharge openings in any manner.
9. An air curtain heater has hot and arcing or sparking parts inside. Do not install and use it in areas where gasoline, paint or flammable vapors or liquids are used or stored.
10. Use this air curtain heater only as described in this instruction manual. Any other use not recommended by the manufacturer may cause fire, electric shock or injury to persons.
11. If this air curtain heater is electric heated it has an overheat safety cut-out system which will operate if temperatures at the electric heating elements get excessive and prevent the electric heating elements functioning. This is indicated by flashing LEDs on the Remote Control. If this happens refer to Sections 8.2 & 14.1 Overheat Safety cut-out for further instructions.

1. ELECTRICAL SAFETY

**Danger: Disconnect ALL electrical supplies before servicing**

Electrical Supply and Wiring to the Air Curtain

All electrical wiring and connections MUST be carried out by a competent qualified electrician in accordance with the latest edition of local and national electrical codes and regulations and/or local statutory regulations.

- In accordance with Local and/or National Electrical Codes, a 1 phase or 3 phase local disconnect [field supplied by others] with a contact separation of at least 1/8 inch [3mm] on all poles, must be fitted in the electrical supply to the air curtain and located in an accessible position adjacent to the unit. Units with dual electrical supplies (see * in Table below) must have a common disconnect to switch off both supplies simultaneously.
- The appliance must be connected by wires/cables having an appropriate heat resistant temperature rating.
- All supply wiring, circuit breakers and other electrical installation equipment must be correctly sized for the air curtain model being installed; see Section 2: Specifications.
- Models with heating elements requiring a 480V or 600V, 3 phase electrical supply - see Section 2: Specifications, Electrical Supply – also need a separate 208V to 240V electrical supply to operate fan motors and controls.
- A 1 inch [25mm] cable or conduit connector of IP21 rating should be used for the connection of Electrical Supply into the air curtain.
- See Wiring Diagrams for connecting electrical supply and control cables to the air curtain.
- The air curtain must be grounded.

</table>

NOTE:
* Separate electrical supply for heaters [480 / 600V] and fan motors [208 / 240V]
Fan Speeds: Air Volume Flow Rate

Factory settings for the 3 fan speeds are indicated in Tables 2 and 3 below:

**Fan powered 208V (refer to wiring diagrams in Appendix 2)**

<table>
<thead>
<tr>
<th>Fan Speed</th>
<th>Max. Air Velocity at Outlet Grille ft/min [m/sec]</th>
<th>Maximum Air Curtain Mounting Height ft [m]</th>
<th>Sound Pressure Level dB(A) at 10ft [3m]</th>
<th>Air Volume Flow Rate / cfm [m³/h]</th>
</tr>
</thead>
</table>

**Fan powered 230V (refer to wiring diagrams in Appendix 2)**

<table>
<thead>
<tr>
<th>Fan Speed</th>
<th>Max. Air Velocity at Outlet Grille ft/min [m/s]</th>
<th>Maximum Air Curtain Mounting Height ft [m]</th>
<th>Sound Pressure Level dB(A) at 10ft [3m]</th>
<th>Air Volume Flow Rate / cfm [m³/h]</th>
</tr>
</thead>
</table>

Sound pressure levels dB(A) at 3m/10ft distance are for a single air curtain mounted at its maximum mounting height, operating in a room with average acoustic characteristics as defined in CIBSE Guide B5 (reverberation time 0.7s at 1kHz) and a room size equivalent to 8 air changes per hour (ac/h). Care needs to be taken when selecting air curtains for an installation as noise levels can be several dB higher if the mounting height is reduced, if the room is more ‘live’ (i.e. hard surfaces, no furnishings or absorbent materials), if the room is smaller than 8 ac/h equivalent or a combination of these factors. Noise levels will also increase if more than one air curtain is installed at the same doorway (e.g. +3dB(A) for 2 equal point sources: direct field).
3. PACKAGE CONTENTS

NOTE: If any parts are missing or damaged during shipment, make note on bill of lading and contact your place of purchase immediately.

The following items are supplied in the box at delivery.

2500 Series Surface Mounted Air Curtain

Note: End caps are supplied loose to be fitted during installation

Wired-Remote Control

Supplied with 20 ft. [6m] RJ Control Cable

Wall Brackets and M6 Fixing Bolts

3 wall brackets for 1566 & 1587 units

3-port control valve [water heated units]

Factory fitted inside air curtain

Outdoor Air Thermostat [Optional – field supplied]

Simple weather compensation control [disables heating on warmer days]

Tools required for installation:

- Flat blade screwdrivers
- Phillips head screwdrivers
- 10 mm wrench
- Adjustable wrench
- Level
- Electric Drill
- Ladders
- Appropriate lifting equipment
4. INSTALLATION

This air curtain is designed to be located inside the building, horizontally over a doorway. It must not be installed outside of the building, and must be operated at temperatures above 21°F [-6°C]. Condensation forming in or on the unit may result in reduced life expectancy.

4.1 Location

Mount the air curtain above and as close to the doorway opening as possible:

- The height of the discharge grille above the floor to be no more than indicated in Fig 1
- At least 4in [100mm] clearance (air gap) above electric/water heated air curtains (Fig 1)

Beware of doorway top edges, structural beams, door opening/closure devices, etc., which may interfere with the air stream and affect the location of the unit.

![Fig 1]

**NOTE:** For the air curtain to work effectively the width of the open doorway should be less than the length ‘A’ of the air curtain, see Appendix 1.

4.2 Wall Mounting

**NOTE:** Use suitable bolts (field supplied) to fix the unit to the wall, considering the type of wall construction and the weight of the unit (see Section 2: Table 1: Specifications).

**Step 1** Bolt all wall brackets to the rear face of the unit using the M106 fixing bolts supplied (see Fig 2).

**Step 2** Drill anchor points in the wall, referring to Appendix 1 for correct positioning.

**Step 3** Screw in the top wall bolts leaving a small gap between the bolt head and the wall.

**Step 4** Lower the unit onto the bolts via the key-hole slots in the top of the wall brackets and screw in the bottom wall bolts.

**Step 5** Tighten all mounting bolts until the air curtain is safely secured to the wall.
4.3 Ceiling Suspension

**WARNING:** It is the sole responsibility of the installer to ensure that the fixing locations and field supplied suspension system used are suitable for the air curtain being installed.

3/8” UNC Threaded Rods (field supplied) are used to suspend the unit from the ceiling.

**Step 1** Install field supplied ¼” locking nuts on to and up from bottom of the threaded rods

**Step 2** Screw the threaded rods into ALL of the holes in the top face of the unit

**NOTE:** Do not screw suspension rods in too far. (Interference with internal components)

**Step 3** Tighten 3/8” locking nuts to top of unit to secure suspension rods into the casing and prevent rod rotation and coming loose.

**Step 4** Secure each suspension rod suitably to the structure (field supplied hardware) to support the weight of the unit (see Section 2: Table 1: Specifications for weight).

4.4 Low Pressure Hot Water [LPHW] Models

For LPHW models ensure that isolation valves [field supplied by installer] are fitted in the supply and return pipework adjacent to the air curtain and connected correctly as shown in the diagram in Appendix 1.

For the design of the pipework system and pump, flow rates and pressure drops for maximum heat output of the air curtain are indicated in Table 4.

<table>

</tr>
</tbody>
</table>

**NOTE:** Water Pressure Drop is across the supply and return pipework to the air curtain and includes the coil fitted inside the unit and the valve fitted in the pipework to the unit.

Water flow rates and pressure drops at different water temperatures can be calculated using the SchwankAir coil calculation program. Visit the Schwank website for details.
5. ACCESS FOR ELECTRICAL CONNECTION

5.1 How to access terminals
To gain access to the air curtain for connection and commissioning, remove air inlet grilles and bottom access panel as instructed below.
First remove the plastic end caps at each end of the unit (if fitted), by pulling off from the end.

NOTE: All air curtain panels are protected with a plastic film. Peel off protective film when access panels are removed.

5.1.1 Remove air inlet grilles
Using a Philips No 1 screwdriver, remove each grille with its filter.
To remove, insert screwdriver into the elongated hole at the bottom corner of the grille (see Figure 5) and turn the screw counterclockwise.

5.1.2 Remove bottom access panel
Unfasten the securing screw at each end (see 1, Fig 6) and, if applicable, two screws in the center of units 2572 and 2593.
To remove, slide the bottom access panel outwards (see 2, Fig 6).
6. WIRED REMOTE CONTROL INSTALLATION

Mount the Wired-Remote Control in a convenient location directly to the wall or onto a switch box. The wire from the remote control plugs in to either one of the female receptacles on top of the unit. The other receptacle can be used for the control of multiple units with one remote control (see Section 9 below).

6.1 Wall mounting

Step 1 Undo the screw on the top of the remote control case and pull the back case away (see Fig 7).

Step 2 Feed one end of the RJ control cable through the back case, secure it, then screw the back case to the wall using suitable hardware (field supplied).

Step 3 Connect the RJ plug to the RJ socket on the PCB in the remote control.

Step 4 Refit the front case.

6.2 Switch box mounting

Step 1 Using a screwdriver undo the screw on the top of the remote control case and pull the back case away (see Fig 7).

Step 2 Feed one end of the RJ control cable through the switch box, feed and secure the RJ control cable through the back case and secure back case to switch box using 2 mounting screws (field supplied) (see Fig 8).

Step 3 Connect the RJ plug to the RJ socket on the PCB in the remote control.

Step 4 Refit the front case.

7. OPTIONAL REMOTE CONTROL SETTINGS

On the back of the printed circuit board (PCB) inside the Wired-Remote Control are four DIP switches that provide the following optional features (Table 5):

<table>
<thead>
<tr>
<th>DIP</th>
<th>Feature</th>

</tr>
</tbody>
</table>
8. EXTERNAL CONTROLS

8.1 Remote switch contacts IN0, IN1

Terminals IN0 and IN1 on the printed circuit board (PCB) inside the air curtain can be used to provide different control strategies using remote dry contacts (see Fig 9). (Unit ships with jumper wires in place). This could be to provide remote On/Off from a timer or BMS Digital/Output contact, to work with a door switch or for simple weather compensation control to disable heating when outdoor air temperature becomes warmer. Table 6 describes the different

WARNING: Do not apply any voltage to dry contact terminals IN0 and IN1.
Voltage will damage the printed circuit board.

<td></td>
<td>COLD DAY</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>WARM DAY</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: Wire remote switch dry contacts to 2-way screw terminals IN0 and IN1 using 2-core cable.

*NOTE: The Wired-Remote Control must stay plugged-in for the air curtain to operate. An optional plug-in EEPROM is available from Schwank so the Remote Control can be un-plugged and the air curtain continue operating. Visit the Schwank website for details.
8.2 Overheat safety cut-out indication
For electric heated air curtains the PCB includes a fault indication signal if the overheat safety cut-out on the electric heater operates.
Changeover dry contacts (6A 250VAC 30VDC) can be wired via the 3-way screw terminal “HEALTHY” (see Fig 10).
Refer to Section 14.1: ‘Overheat safety cut-out’ for instruction on how to reset an overheat safety cut-out condition.

8.3 Weather compensation control (Summer/Winter)
To save heating energy on warmer days a simple weather compensation (Summer/Winter) heat control strategy can be used. Fit an outdoor air thermostat with dry contacts (supplied by the installer) to a north facing wall.
Use a 2-core cable to connect the outdoor air thermostat to 2-way terminal IN1 on the PCB (see Fig 11)
On the air curtain PCB, set DIP 4 to OFF per Table 5, (see Section 8.1: Remote switch contacts IN0, IN1).

**WARNING:** Do not apply any voltage to terminal IN1 as this will damage the PCB.

**NOTE:** To promote increased energy saving a more advanced weather compensation control strategy is available from SchwankAir. Using a heating curve, the discharge air temperature of the airstream coming from the air curtain is controlled against the outside air temperature.
Visit the Schwank website for details.

9. MULTIPLE AIR CURTAIN SYSTEM CONTROLLED BY SINGLE WIRED-REMOTE
- Each air curtain must have its own individual electrical supply, but up to 8 units can be controlled by a single wired-remote control
- Each air curtain is supplied with a remote control with 20 ft [6m] RJ cable connected
- Install the first remote control to the first unit
- Disconnect the RJ cable(s) from control(s) shipped with the additional unit(s)
- Connect a maximum of 8 units together by plugging the RJ extension cable into one of the top receptacles of one unit then into the next consecutive unit

**Fig 12**

maximum 8 units
10. SYSTEM CONFIGURATION
Optional features

Isolate and disconnect air curtain from the power source before making any changes.

DIP switches on the air curtain PCB (see Fig 13) provide the following optional features, as explained below:

- Fan heat interlock
- Disable fan run-on
- Thermostat master (for master/slave installations)
- Weather compensation heat control (Summer/Winter)
- Door switch control

<table>

<td></td>
</tr>
</tbody>
</table>

A range of advanced factory fitted and plug-in control options are available from SchwankAir to enhance the performance of the air curtain PCB controller. These include advanced weather compensation control using a heating curve, outlet air temperature control, Modbus BMS control, modulating heater outputs and EEPROMs for non-standard control strategies. Visit the Schwank website for details.
11. WIRED-REMOTE CONTROL OPERATION

Use the Wired-Remote Control to operate the air curtain as follows:

1 **On/Off**

   Turns the air curtain On or Off.

   **NOTE:** If an electric heated air curtain is heating when switched off the fan will run-on for approximately 2 minutes to dissipate heat.

2 **Manual/Automatic**

   Switches between Manual and Automatic modes.

   The Auto On indicator LED is lit for "Auto Mode" and unlit for "Manual Mode".

3 & 4 **Heating level controls**

   **Manual mode**

   Select heating level from zero, to half heat, to full heat by stepping up or down with the heating level controls. The heating level scale shows the level selected.

   **Automatic mode**

   Heat output is controlled automatically according to:
   - Inlet air temperature, or
   - Room air temperature

   This is dependent on the settings made in Section 10: Remote Control Settings - DIP switch 4.

5, 6 & 7 **Fan speed**

   Switch fan speed between Low, Medium and High respectively. The appropriate LED illuminates.

   **NOTE:** On Ambient (non-heated) units the LED indicators on the Heating level scale and AUTO button illuminate but are ignored.
12. COMMISSIONING THE SYSTEM

12.1 Verify system operation
To commission the system, verify the following conditions are met:
- All fans operate at Low, Medium and High speeds.
- There is no excessive mechanical noise coming from the fans.
- When heating is selected, the air stream from the discharge grille warms up across the whole length of the air curtain.
- When set to manual with fans set to high speed, heat level increases as higher heat is selected.
- Warm air reaches across the doorway with door open or closed.
- Wired-Remote Control operates correctly in both manual and auto modes.

12.2 Instruct customer and hand over Instruction Manual
- Before leaving the site, hand over the instruction manual to the customer / end user or their representative for safe keeping on file.

Explain that any person operating the air curtain must be given supervision and instruction by the person responsible for their safety, concerning the safe use of the unit and to understand any hazards involved. Children and those with reduced physical, sensory or mental capabilities should not operate the air curtain.

Recommend that the doorway should be closed whenever possible but that during times of high pedestrian use it will become an ‘open doorway’. The air curtain then serves an essential purpose by saving energy and providing comfort to occupants.

Explain that the inlet grilles and air filters (if fitted) must be cleaned regularly and the unit serviced at schedule intervals – see section 15: Service & Maintenance.

NOTE: Leave these instructions with the customer/end user or their representative!! File these instructions for safe keeping and future reference.

13. SIGN OFF
Complete the following once commissioning is completed:

14. FAULT CONDITIONS

14.1 Overheat Safety cut-out
An overheat fault in electric heated units may cause the overheat safety cut-out(s) to activate. This is indicated by flashing LEDs on the Remote Control and a red status LED on the PCB inside the air curtain.

Before resetting ensure there is adequate air flow from the air curtain and the unit has been commissioned as per section 12.

To reset an overheat safety cut-out condition:

Step 1 Switch off the electrical supply to the air curtain.
Step 2 Allow time for the air curtain to cool down, typically 10 minutes.
Step 3 Switch on the electrical supply to the air curtain.
Step 4 Press the Auto button on the Wired-Remote Control 4 times.

Air curtain heaters will then operate and after 30 seconds the LEDs on the remote control will stop flashing and the status LED on the PCB in the air curtain will flash green.

14.2 Fuses
In the event of an electrical fault internal electrical fuses may operate.

There are two 6.3A(T) internal fuses located in two DIN-rail fused terminals inside the air curtain.

There are also two internal fuses located on the PCB inside the air curtain:
- Fuse 6.3A(T) supplies the fan motors within the air curtain
- Fuse 100mA(F) controls the circuitry of the PCB

14.3 Air Curtain PCB status indication
There is a status LED on the PCB inside the air curtain (See LED shown on Wiring Diagrams in the Appendix).

This indicates the status of the control system as follows:
1. LED flashing green – operation normal
2. LED flashing red – low supply voltage, remote control not plugged in or RJ cable fault
3. LED permanently red – overheat safety cut-out(s) open circuit from an overheat situation. Indicators on Wired-Remote Control also flash!
   (see Section 14.1: How to reset Overheat Safety Cut-out)
15. SERVICE & MAINTENANCE

**WARNING:** Failure to adequately maintain the unit and provide a suitable cleaning schedule will result in a loss of performance and reduced life expectancy of the air-curtain and possible overheating and fire risk with electric heated units.

15.1 Perform Every week

**NOTE:** Weekly maintenance can be carried out by the Cleaner or Janitor from floor level.

Turn off the air curtain to prevent entry of dust then clean the face of the air inlet grilles and air filters inside the grilles using a vacuum cleaner with an extension tube and brush.

15.2 Perform Every 3 months

**WARNING:** Before servicing, isolate and disconnect the air curtain from the electrical power.

**WARNING:** The following servicing and maintenance must be carried out by a competent electrician or a SchwankAir approved technician.

Clean and inspect the inside of the air curtain as follows:

**Step 1** Remove plastic end caps at each end of the unit by pulling off to the side.

**Step 2** Use a Philips No.1 screwdriver to remove air inlet grilles by releasing the fasteners at the bottom corners of each air inlet grille. See Fig 5, Section 5.1.1.

**Step 3** Clean and remove any build-up of dust and dirt within the air-curtain (inlet/outlet grilles, electric heaters, fan impellers, housings and motors) using a vacuum cleaner and soft brush.

**NOTE:** Build-up of dirt on fan impellers can cause vibration, noise and excessive wear on the motor bearings.

**Step 4** Check within the unit to ensure all electrical connections and crimped terminals are tight and that all wires/cables are in good condition.

**Step 5** On electric heated air curtains remove the fan deck(s) as follows to inspect electric heaters, electrical wiring and connections and to remove dust, dirt and debris:

- Unclip the fan motor electrical connector.
- Unfasten 4 x M6 nuts/bolts on each fan deck.
- Unfasten M4 screws at bottom edge of fan deck.
- Carefully lift the fan deck away from the air curtain

Refit fan deck(s) and air inlet grilles after servicing. Reconnect electrical supply and test to ensure correct operation (see Section 12: Commissioning).
16. WARRANTY

The Manufacturer warrants that this product is free from defects in material or workmanship under normal use and service subject to the terms of this document.

TWO YEAR WARRANTY

Subject to the conditions and limitations stated herein, during the term of this limited warranty, we will supply any component part (at our option a new or repaired component part) of the heater as defined below, which the Manufacturer's examination determines to be defective in workmanship or material for a period of two (2) years from the date of installation, unless otherwise specified below. This warranty applies to the heater’s original owner, and subsequent transferees and only if the unit is installed, operated, and maintained in accordance with the printed instructions accompanying the unit and in compliance with all applicable installation codes and good trade practices.

WHAT IS NOT COVERED

The Manufacturer shall not be responsible for any expenses, including service, labor, diagnosis, analysis, material or transportation charges incurred during removal or reinstallation of this product, or any of its components or parts. All labor or service charges shall be paid by the owner. This warranty does not cover products improperly installed, misused, exposed to or damaged by negligence, accident, corrosive or contaminating atmosphere, water, excessive thermal shock, impact, abrasion, normal wear due to use, alteration or operation contrary to the owner's manual or if the serial number has been altered, defaced or removed. This warranty shall not apply if the electrical input to the product varies by more than ±10% of the rated input on the rating plate. The Manufacturer shall not be liable for any default or delay in performance by its warranty caused by any contingency beyond its control, including war, government restrictions, or restraints, strikes, fire, flood, acts of God, or short or reduced supply of raw materials or products.

LIMITATIONS AND EXCLUSIONS

This document contains all warranties made by the Manufacturer and may not be varied, altered or extended by any person. There are no promises, or agreements extending from the Manufacture other than the statements contained herein. THIS WARRANTY IS IN LIEU OF ALL WARRANTIES EXPRESSED OR IMPLIED, TO THE EXTENT AUTHORIZED BY THE LAWS OF THE JURISDICTION, INCLUDING SPECIFICALLY THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

It is understood and agreed that the Manufacturer’s obligation hereunder is limited to repairing or replacing parts determined to be defective as stated above. In no event shall the Manufacturer be responsible for any alleged personal injuries or other special, incidental or consequential damages. As to property damages, contract, tort or other claim the Manufacturer’s responsibility shall not exceed the purchase price paid for the product.

All replacement parts will be warranted for the unused portion of the warranty coverage period remaining on the applicable unit.

Some Authorities do not allow certain warranty exclusions or limitations on duration of warranty or the exclusions or limitations of incidental or consequential damages. In such cases, the above limitations or exclusions may not apply to you and are not intended to do so where prohibited by law. This warranty gives you specific legal rights. You may also have other rights which vary by jurisdiction.
